GRAPE CRUSH REPORT

Information contained in this Report was supplied by processors to fulfill the reporting requirements of Section 55601.5 of the Food and Agriculture Code.

The Final Grape Crush Report includes all grape tonnage crushed and purchased during the 1985 season. Changes in tonnage, Brix, and prices from the preliminary report to this final report were due to: additional purchased tonnage and prices from reference price contracts that were in effect prior to January 1, 1977 and were priced by February 25, 1986; late reports; and corrections to the original data. Reporting errors by some processors have caused a change in some district/variety entries.

Details of the crushed tonnage, degrees Brix and weighted average prices are reported by grape type and variety as well as by grape pricing district. The 17 districts refer to the area in which the grapes were grown as defined in the Administrative Code.

All grapes crushed in 1985 reached 2,840,713 tons, 10 percent larger than last year's crush, but down 9 percent from the record high 1982 crush. The crush of raisin type grapes totaled 558,082 tons, down 5 percent from the previous year. Thompson Seedless, the major raisin variety, was down 6 percent to 505,929 tons. Table varieties totaled 215,130 tons crushed, up 26 percent from last year. An increase of 24 percent in the Tokay variety, with 150,305 tons, was reported. All wine varieties crushed totaled 2,067,501 tons, up 13 percent from 1984. Black varieties, with 859,832 tons, were up 9 percent and white varieties totaled 1,207,669 tons for an increase of 17 percent. White wine varieties accounted for 58 percent of the total wine varieties crushed compared with 57 percent in 1984 and 55 percent in 1983. This is the third year the crush of all white varieties has exceeded the quantity of all black varieties crushed. The major white wine variety crushed was French Colombard with 585,393 tons, representing 48 percent of the total white wine varieties crushed. Grenache was the black wine variety with the largest crush totaling 126,683 tons, up 5 percent from last year. Grenache and Barbara each represented 15 percent of the total black wine varieties crushed.

The weighted average price per ton for all grapes purchased for wine, concentrate, juice, vinegar and beverage brandy was \$160.95, down 6 percent from the 1984 price of \$171.79. Weighted average price for raisin type grapes was \$74.74 per ton, down \$3.61; table type \$131.18 per ton, up \$1.63; and wine type \$185.01 per ton, down \$17.04. White wine varieties averaged \$191.75 per ton, down \$28.47 from 1984, while black wine varieties averaged \$174.92 per ton, down \$1.60 from last year. The weighted average degrees Brix for all grapes crushed was 20.7 and averaged 21.1 for all grapes purchased.

EXPLANATION OF TABLES

Table 1 is a <u>summary of the 1985 crop State totals</u> by grape type and varieties that are shown in detail by grape pricing districts in Tables 2 through 6. State totals and averages for 1984 are shown for comparison.

Table 2 includes over-the-scale fresh tonnage of all grapes crushed by California processors from the 1985 crop. Over-the-scale fresh weight tonnage includes materials other than grapes (MOG) and defects. This table is broken down by the 17 grape pricing districts and by variety. State totals for 1984 are shown for comparison. Crushed tonnage includes all grapes crushed whether: grown and crushed by processors; purchased and crushed by processors; crushed by cooperatives, juice manufacturers, etc.; or crushed for others, including growers.

Table 3 shows the <u>weighted average degrees Brix for all grapes crushed</u> (Table 2) by California processors from the 1985 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 1984 are shown for comparison.

Table 4 includes net weight fresh tonnage of all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy by California processors from the 1985 crop. Net weight fresh tonnage does not include material other than grapes (MOG) and defects or other weight adjustments deducted from gross weight. The purchased tonnage is reported by variety and grape pricing districts. State totals for 1984 are shown for comparison. Table 4 does not include tonnage purchased as distilling material other than beverage brandy, this is shown in Table 7. Prices for all tonnage shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

Table 5 shows the <u>weighted average degrees Brix for all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy</u> (Table 4) by California processors from the 1985 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 1984 are shown for comparison. Table 5 does not include degrees Brix of tonnage purchases as distilling material other than beverage brandy, this is shown in Table 7. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

Table 6 gives the weighted average price per ton, delivered basis, of all tonnage purchased for wine, concentrate, juice, vinegar, and beverage brandy (Table 4) by California processors from the 1985 crop. The weighted average prices are reported by variety, and grape pricing districts. State averages for 1984 are shown for comparison. Table 6 does not include prices of tonnage purchased as distilling material other than beverage brandy, this is shown in Table 7. Prices shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

Weighted average prices reflect final prices through January 10, 1986 and include reference price contracts written prior to January 1, 1977 with prices final as of February 25, 1986. Weighted average prices also include any Brix adjustments, bonuses, or allowances. Prices are equivalent to delivered basis in the area grown including normal within-area hauling allowances. Purchases made on a roadside basis include the usual hauling allowance for local delivery in the area grown. Out-of-area purchases made on a delivered basis do not include extra hauling allowances for delivery outside the area.

The following example indicates the method used for calculating weighted averages:

		Total G	apes			3	Pinal Prices of Grapes Rurchased from Grover(s)									
	1 1	Crush				Total						Actual final price paid by				
Variety	Dist.	Over	Wtd.	Net	Wtd.	Brix	Base	Acceptabl			Brix	winery to grwr at each base	Paid	Wtd.		
		the	Avg.	Weight	Avg.	/Columns\	Price	Brix	Factors Per Degree		stment	price and Brix adjustment	/Columns	Average		
			Degrees Brix	Fresh Tons	Degrees	5 x 6	Per	Limits Max. Min.	Brix Per Ton Plus and Minus *		Max. Mi	factor including bonuses or allowances. Dollars/Ton	(S X B)	Price Per Ton		
Column	-	Tons	BEIX	Tons	DC1X	(3 × 0 /	7	Dax ITIL	10	12	13 1	B B	0	15		
COLUMN	7		- 4					1 0 1 2	1 20							
2infandel	1	100.0	20.1	100.0	20.1	2,010.00	\$ 450.00	25 19	+ or - 10%	22	24 2	\$ 364.50	\$ 36,450.00	\$		
2infandel	1	20.5	21.3	20.5	21.3	436.65	450.00	25 19	+ or - 10%	22	24 2	418.50	8,579.25			
2infandel	1	_10_6	23.5	10.6	23.5	249.10	450.00	25 19	+ or - 10%	22	24 2	517.50	5,485.50			
		131.1	20.6	131.1	20.6	2,695.75							\$ 50,514.75	\$ 385.31		

Columns 4 and 6 were obtained by dividing the total Net Fresh Tons, (Columns 3 and 5) into the total Brix of these same tons (Column A): $\frac{2,695.75}{131.1} = 20.6$

Column 15 was obtained by dividing the total Net Fresh Tons, (Column 5) into the total dollars paid for these same tons (Column C): \$50.514.75 = \$385.31131.1

Table 7 shows all grape tonnage purchased as distilling material other than beverage brandy by California processors from the 1985 crop. The tonnage, weighted average degrees Brix and price per ton are shown by grape type and variety. State totals and averages for 1984 are given for comparison.

Table 8 shows <u>base prices paid to growers</u> by variety, by Brix adjustment factors, and percent of variety tonnage. The weighted average of all base prices by variety is not shown in this publication, but is available in summary form by contacting the Federal-State Market News Service, Sacramento, California.

The Brix adjustment factors determine adjustments to base prices to compensate for sugar variations. In this report, adjustments are expressed in dollars per ton, or percent of base price per degree variance from the established Brix base. Occasional lots are traded on price per degree Brix as delivered.

Table 9 includes tonnage of all grapes crushed to growers' accounts by California processors from the 1985 crop. Growers retained ownership of these grapes at the time of crushing. This tonnage is reported by grape pricing districts and variety. There are no 1984 State totals for comparison.

See code descriptions beginning on page 42. Percentage total by variety will not necessarily add to 100.00 due to rounding. Price basis per degree 8rix. Less than .005 percent.

NO PREMIUM OR PENALTY

The following Brix adjustment factors are on a per degree Brix basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated. Most processors, however, indicate maximum and/or minimum Brix acceptance limits. Grapes testing above or below these limits may be subject to price renegotiation, acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base price and bonus unless otherwise stated. Inere are factors other than Grix, such as material other than grapes (MOG), defects, weight loss in late harvest grapes, and sugar/acid ratios that affect grape prices. These were not considered in is presentation, unless otherwise stated, but were considered in striving at weighted average prices.

NOTE: Brix adjustment factors designated with an asterisk were added since release of the Preliminery Grape Crush Report, 1985 crop.

GRAPE CRUSH REPORT

Information contained in this Report was supplied by processors to fulfill the reporting requirements of Section 55601.5 of the Food and Agriculture Code.

The Final Grape Crush Report includes all grape tonnage crushed and purchased during the 1986 season. Changes in tonnage, Brix, and prices from the preliminary report to this final report were due to: additional purchased tonnage and prices from reference price contracts that were in effect prior to January 1, 1977 and were priced by February 25, 1987; late reports; and corrections to the original data. Reporting errors by some processors have caused a change in some district/variety entries.

Detail of the crushed tonnage, degrees Brix and weighted average prices are reported by grape type and variety as well as by grape pricing district. The 17 districts refer to the area in which the grapes were grown as defined in the Administrative Code.

All grapes crushed in 1986 totaled 2,793,510 tons, 2 percent less than last year's crush, and 10 percent below the record high 1982 crush. The crush of raisin type grapes totaled 504,716 tons, down 10 percent from the previous year. Thompson Seedless, the major raisin variety, was down 12 percent to 445,094 tons. Table varieties totaled 234,623 tons crushed, up 9 percent from last year. A decrease of 6 percent in the Tokay variety crush was more than offset by increases in other varieties. All wine varieties crushed totaled 2,054,171 tons, down 1 percent from 1985. Black varieties, with 762,111 tons, were down 11 percent and white varieties totaled 1,292,061 tons for an increase of 7 percent. White wine varieties accounted for 63 percent of the total wine varieties crushed compared with 58 percent in 1985 and 57 percent in 1984. This is the fourth consecutive year the crush of all white varieties has exceeded the quantity of all black varieties crushed. The major white wine variety crushed was French Colombard with 677,046 tons, representing 52 percent of the total white wine varieties crushed. Zinfandel was the black wine variety with the largest crush totaling 143,402 tons, up 16 percent from last year. Zinfandel represented 19 percent of the total black wine varieties crushed. Grenache was the second largest black variety accounting for 14 percent of the total black wine varieties crushed with 103,054 tons.

The weighted average price per ton for all grapes purchased for wine, concentrate, juice, vinegar and beverage brandy was \$186.20, up 16 percent from the 1985 price of \$160.95. The overall price rise was mainly caused by increased prices for raisin and black wine type grapes. Weighted average price for raisin type grapes was \$104.84 per ton, up \$30.10; table type \$132.87 per ton, up \$1.69 and wine type \$207.84 per ton, up \$22.83. White wine varieties averaged \$198.82 per ton, up \$7.07 from 1985; while black wine varieties averaged \$224.00 per ton, up \$49.08 from last year. The weighted average degrees Brix for all grapes crushed was 20.3 and averaged 20.2 for all grapes purchased.

EXPLANATION OF TABLES

- Table 2 includes over-the-scale fresh tonnage of all grapes crushed by California processors from the 1986 crop. Over-the-scale fresh weight tonnage includes materials other than grapes (MOG) and defects. This table is broken down by the 17 grape pricing districts and by variety. State totals for 1985 are shown for comparison. Crushed tonnage includes all grapes crushed whether: grown and crushed by processors; purchased and crushed by processors; crushed by cooperatives, juice manufacturers, etc.; or crushed for others, including growers.
- Table 3 shows the <u>weighted average degrees Brix for all grapes crushed</u> (Table 2) by California processors from the 1986 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 1985 are shown for comparison.
- Table 4 includes net weight fresh tonnage of all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy by California processors from the 1986 crop. Net weight fresh tonrage does not include material other than grapes (MOG) and defects or other weight adjustments deducted from gross weight. The purchased tonnage is reported by variety and grape pricing districts. State totals for 1985 are shown for comparison. Table 4 does not include tonnage purchased as distilling material other than beverage brandy—this is shown in Table 7. Prices for all tonnage shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.
- Table 5 shows the weighted average degrees Brix for all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy (Table 4) by California processors from the 1986 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 1985 are shown for comparison. Table 5 does not include degrees Brix of tomage purchased as distilling material other than beverage brandy, this is shown in Table 7. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.
- Table 6 gives the weighted average price per ton, delivered basis, of all tonnage purchased for wine, concentrate, juice, vinegar, and beverage brandy (Table 4) by California processors from the 1986 crop. The weighted average prices are reported by variety, and grape pricing districts. State averages for 1985 are shown for comparison. Table 6 does not include prices of tonnage purchased as distilling material other than beverage brandy, this is shown in Table 7. Prices shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

Weighted average prices reflect final prices through January 10, 1987 and include reference price contracts written prior to January 1, 1977 with prices final as of February 25, 1987. Weighted average prices also include any Brix adjustments, bonuses, or allowances. Prices are equivalent to delivered basis in the area grown including normal within—area hauling allowances. Purchases made on a roadside basis include the usual hauling allowance for local delivery in the area grown. Out-of-area purchases made on a delivered basis do not include extra hauling allowances for delivery outside the area.

The following example indicates the method used for calculating weighted averages:

	1	Total G	rapes		Pinal Prices of Grapes Purchased firm Grower Actual final price paid by Total										
Variety	Dist.	Over	Wtd.	Net	Wtd.	Total Brix	Base Price	Acceptable Brix	Brix Adjustment Pactors Per Degree		Brix Stownt		winery to grar at each base price and Brix adjustment	Paid	Wtd. Average
		the Scale Tons	Avg. Degrees	Weight Fresh Tons	Avg. Degrees Brix	(Columns)	Per	Hin-Nex.	Brix Per Tor Plus and Munus *	Base		Max.	factor including bonuses or allowances. Dollars/Ton	(Columns)	Price Per Ton
Column		3	4	5	6	A	7	I B I Y	I10	12	113	114	- В		
2intandel	1	100.0	20.1	100.0	20.1	2,010.00	\$ 450.00	19 25	+ or - 10%	22	20	24	. 364.50	\$ 36,450.00	Ş
2infancel	1	20.5	21.3	20.5	21.3	436.65	450 .00	19 25	+ or - 10%	22	20	24	418.50	8,579.25	
Zinfan sel	1	14.6	23.5	20.6	23.5	249.10	150.00	19 25	+ or - 10% .	22	20	24	517.50	_2.485.20	
		131.1	20.6	131.1	20.6	2,695.75								\$ 50,514.75	\$ 385.33

Columns 4 and 6 were obtained by dividing the total Net Fresh Tons, (Columns 3 and 5) into the total Brix of these same tons (Column A): $\frac{2,695.75}{131.1} = 20.6$

Column 15 was obtained by dividing the total Net Fresh Tons, (Column 5) into the total dollars paid for these same tons (Column C): \$50,514.75 = \$385.31 131.1

Table 7 shows all grape tonnage purchased as distilling material other than beverage brandy by California processors from the 1986 crop. The tonnage, weighted average degrees Brix and price per ton are shown by grape type and variety. State totals and averages for 1984 are given for comparison.

Table 8 shows <u>base prices paid to growers</u> by variety, by Brix adjustment factors, and percent of variety tonnage. The weighted average of all base prices by variety is not shown in this publication, but is available in summary form by contacting the Federal-State Market News Service, Sacramento, California.

The Brix adjustment factors determine adjustments to base prices to compensate for sugar variations. In this report, adjustments are expressed in dollars per ton, or percent of base price per degree variance from the established Brix base. Occasional lots are traded on price per degree Brix as delivered.

Table 9 includes tonnage of all grapes crushed to growers' accounts by California processors from the 1986 crop. Growers retained ownership of these grapes at the time of crushing. This tonnage is reported by grape pricing districts and variety. Comparisons with 1985 are shown.

See code descriptions beginning on page 42. Percentage total by variety will not necessarily add to 100.00 due to rounding. Price basis per degree Brix. Less than .005 percent.

The following Brix adjustment factors are on a per degree Brix basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated. Most processors, however, indicate maximum and/or minimum Brix acceptance limits. Grapes testing above or below these limits may be subject to price renegotiation, acceptance for use other than for table whee, or rejection by the processors. Discounts for high sugar apply to both base price and bonus unless otherwise stated. There are factors other than Brix, such as material other than grapes (MOS), defects, weight loss in late harvest grapes, and sugar/acid ratios that affect grape prices. These were not considered in this presentation, unless otherwise stated, but were considered in arriving at weighted average prices. NOTE: Brix adjustment factors designated with an asterisk were added since release of the Preliminary Grape Crush Report, 1986 crop.

GRAPE CRUSH REPORT

QVERY LEW

Information contained in this Report was supplied by procesers to fulfill the reporting requirements of Section 55601.5 of the Food and Agriculture Code.

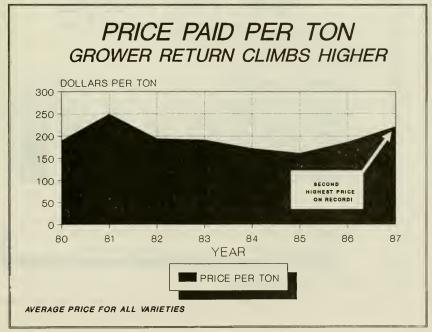

The Final Grape Crush Report includes all grape tonnage crushed and purchased during the 1987 season. Changes in tonnage, Brix, and prices from the preliminary report to this final report were due to: additional purchased tonnage and prices from reference price contracts that were in effect prior to January 1, 1977 and were priced by February 25, 1988; late reports; and corrections to the original data. Reporting errors by some processors have caused a change in some district/variety entries.

Detail of the crushed tonnage, degrees Brix and weighted average prices are reported by grape type and variety as well as by grape pricing district. The 17 districts refer to the area in which the grapes were grown as defined in the Administrative Code. A district map is located on the inside of the front cover.

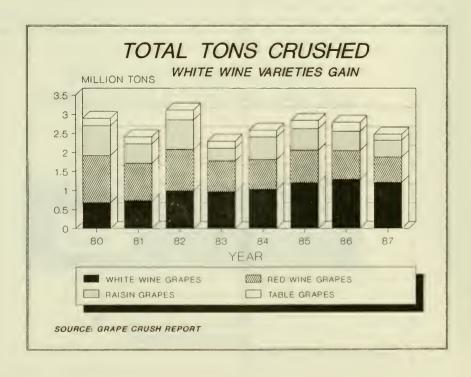

GRAPE PRICES CONTINUE TO RISE

California grape growers have received an average price of \$220.53 per ton for grapes crushed in 1987, up 18 percent from the 1986 average price. The average price has rebounded by 37 percent since 1985. The 1987 price is the second highest on record -- only surpassed by the \$249.40 price paid in 1981.

The 1987 crush totaled 2,486,631 tons, down 11 percent from the 1986 crush and 20 percent less than the record-large 1982 harvest. White wine varieties continue to account for a larger share of all grapes crushed while red wine varieties decline.

LEADING VARIETIES CRUSHED 1987 CROP ALL OTHER VARIETIES 21% FRENCH COLOMBARD 25% CABERNET SAUVIGNON 3% CARIGNANE 3% BARBERA 3% FLAME TOKAY 4% CHARDONNAY 4% CHENIN BLANC 12% GRENACHE 4% ZINFANDEL 6%

LEADING GRAPE VARIETIES

French Colombard, the most widely planted grape variety in California, continued its dominance with 25 percent of the crush volume. Thompson Seedless, a raisin variety grape, remained in second place with 16 percent of the total crush. The remaining top ten varieties were all wine varieties except the seventh largest -- Flame Tokay which fails into the table grape classification.

Grapes produced in District 4 (Napa County) received the highest average price of \$808.63 per ton. District 3 (Sonoma and Marin counties) received the second highest return of \$625.97 per ton. Of the grapes grown Statewide, Chardonnay grapes received the highest average price of \$921.98 per ton. The average price paid for Cabernet Sauvignon grapes was \$630.99 per ton. The 1987 Thompson Seedless price was \$122.45, up 17 percent from the \$104.84 price paid last year. The crush volume of Thompson Seedless grapes declined by 11 percent from 1986 to 397,832 tons.

EXPLANATION OF TABLES

Table 1 is a <u>summary of the 1987 crop State totals</u> by grape type and varieties that are shown in detail by grape pricing districts in Tables 2 through 6. State totals and averages for 1986 are shown for comparison.

Table 2 includes <u>over-the-scale</u> <u>fresh tonnage</u> of <u>all grapes crushed</u> by California processors from the 1987 crop. Over-the-scale fresh weight tonnage includes materials other than grapes (MOG) and defects. This table is broken down by the 17 grape pricing districts and by variety. State totals for 1986 are shown for comparison. Crushed tonnage includes <u>all grapes crushed</u> whether: grown and crushed by processors; purchased and crushed by processors; crushed by cooperatives, juice manufacturers, etc.; or crushed for others, including growers.

Table 3 shows the <u>weighted average degrees Brix for all grapes crushed</u> (Table 2) by California processors from the 1987 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 1986 are shown for comparison.

Table 4 Includes net weight fresh tonnage of all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy by California processors from the 1987 crop. Net weight fresh tonnage does not include material other than grapes (MOG) and defects or other weight adjustments deducted from gross weight. The purchased tonnage is reported by variety and grape pricing districts. State totals for 1986 are shown for comparison. Table 4 does not include tonnage purchased as distilling material other than beverage brandy — this is shown in Table 7. Prices for all tonnage shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

Table 5 shows the weighted average degrees Brix for all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy (Table 4) by California processors from the 1987 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 1986 are shown for comparison. Table 5 does not include degrees Brix of tonnage purchased as distilling material other than beverage brandy, this is shown in Table 7. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

Table 6 gives the weighted average price per ton, delivered basis, of all tonnage purchased for wine, concentrate, juice, vinegar, and beverage brandy (Table 4) by California processors from the 1987 crop. The weighted average prices are reported by variety, and grape pricing districts. State averages for 1986 are shown for comparison. Table 6 does not include prices of tonnage purchased as distilling material other than beverage brandy, this is shown in Table 7. Prices shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

Weighted average prices reflect final prices through January 10, 1988 and Include reference price contracts written prior to January 1, 1977 with prices final as of February 25, 1988. Weighted average prices also include any Brix adjustments, bonuses, or allowances. Prices are equivalent to delivered basis in the area grown including normal within-area hauling allowances. Purchases made on a roadside basis include the usual hauling allowance for local delivery in the area grown. Out-of-area purchases made on a delivered basis do not include extra hauling allowances for delivery outside the area.

The following example indicates the method used for calculating weighted averages:

		Total G	rapes						Pi	inal Prices of Grapes	Purcha	eed fro	Gro	er(s)		
		Crush				Total								Actual final price paid by		
Variety	Dist.	Over	Wtd.	Net	Wtd.	Brix	Base	Accep	table	Brix Adjustment		Brix		winery to grwr at each base	Paid	Wtd.
	1 1	the	Avg.	Weight	Avg.	/- ·	Price	Br		Factors Per Degree		justmen		price and Brix adjustment	10.1	Average
	1 1	Scale	Degrees			(Columns)	Per		its	Brix Per Ton		Limits		factor including bonuses or		Price
	\perp	Tons	Brix	Tons	Brix	\5 x 6 /	Ton	Max.	Ain.	Plus and Minus *	Base			allowances. Dollars/Ton	/ JAB/	Per Ton
Column	→	3 .	1.4.	5	. 6	A	7	<u> </u>	9	10	1_12_		14	В	L C	15
Zinfandel	1	100.0	20.1	100.0	20.1	2,010.00	\$ 450.00	25	19	+ or - 10%	22	24	20	\$ 364.50	\$ 36,450.00	\$
										100				418.50	0.530.35	
Zinfandel	1	20.5	21.3	20.5	21.3	436.65	450 .00	25	19	+ or - 10%	22	24	20	418.50	8,579.25	
Zinfandel	,	30.6	22.5	20.6	22.5	249.10	450.00	25	19	+ or - 10%	22	24	20	517.50	5,485,50	
Zinrandei	1	_10_6	23.5	_10.6	23.5	_249.10	450.00	23	19	7 01 - 106	22	24	20	317.30	71407170	
		131.1	20.6	131.1	20.6	2,695.75									\$ 50.514.75	\$ 385.31
		131.1	20.0	131 +1	20.0	21033.13									4 20,214.72	4

Columns 4 and 6 were obtained by dividing the total Net Fresh Tons, (Columns 3 and 5) into the total Brix of these same tons (Column A): $\frac{2.695.75}{131.1}$ = 20.6

Column 15 was obtained by dividing the total Net Fresh Tons, (Column 5) into the total dollars paid for these same tons (ColumnC): \$50.514.75 = \$385.31

Table 7 shows all grape tonnage purchased as distilling material other than beverage brandy by California processors from the 1987 crop. The tonnage, weighted average degrees Brix and price per ton are shown by grape type and variety. State totals and averages for 1986 are given for comparison.

Table 8 shows <u>base prices paid to growers</u> by variety, by Brix adjustment factors, and percent of variety tonnage. The weighted average of all base prices by variety is not shown in this publication, but is available in summary form by contacting the Federal-State Market News Service, Sacramento, California (916-445-5721).

The Brix adjustment factors determine adjustments to base prices to compensate for sugar variations. In this report, adjustments are expressed in dollars per ton, or percent of base price per degree variance from the established Brix base. Occasional lots are traded on price per degree Brix as delivered.

Table 9 includes <u>tonnage</u> of <u>all grapes</u> <u>crushed</u> to <u>growers!</u> <u>accounts</u> by Callfornia processors from the 1987 crop. Growers retained ownership of these grapes at the time of crushing. This tonnage is reported by grape pricing districts and variety. Comparisons with 1986 are shown.

See code descriptions beginning on page 48.
Percentage total by vaiety will not necessarily add to 100.00 due to rounding.
Less than .005 percent.
Price basis per degree Brix.

The following Brix adjustment factors are on a per degree Brix basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated. Most processors, however, indicate maximum and/or minimum Brix acceptance limits. Grapes testing above or below these limits may be subject to price renegotiation, acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base price and bonus unless otherwise stated. There are factors other than Brix, such as material other than grapes (MGG), defects, weight loss in late harvest grapes, and sugar/acid ratios that affect grape prices. These were not considered in this presentation, unless otherwise stated, but were considered in arriving at weighted average prices. NOTE: Brix adjustment factors designated with an asterisk were added since release of the Preliminary Grape Crush Report, 1987 crop.

ERRATA TO THE FINAL GRAPE CRUSH REPORT 1988 CROP

MARCH 27, 1989

The following tables contain revised information for Districts 8, 11 and 17 in the March 10, 1989 Final Grape Crush Report. Figures not listed were accuratly reported in the final report.

Example of Revision

Table 1 Total Tons Crushed 1988

Sauvignon Vert

Original figure: 562.3 Revised to: 300.6

GRAPE CRUSH REPORT

OVERVIEW

Information contained in this Report was supplied by processors to fulfill the reporting requirements of Section 55601.5 of the Food and Agricultural Code.

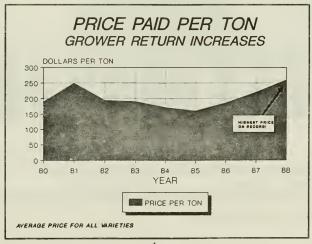

The Final Grape Crush Report includes all grape tonnage crushed and purchased during the 1988 season. Changes in tonnage, Brix, and prices from the preliminary report to this final report were due to: additional purchased tonnage and prices from reference price contracts that were in effect prior to January 1, 1977 and were priced by February 25, 1989; late reports; and corrections to the original data. Reporting errors by some processors have caused a change in some district/variety entries.

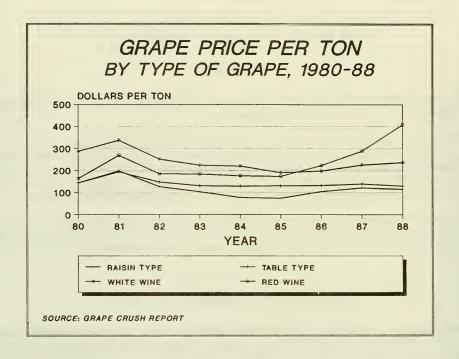

Details of the crushed tonnage, degrees Brix and weighted average prices are reported by grape type and variety as well as by grape pricing district. The 17 districts refer to the area in which the grapes were grown as defined in the Administrative Code. A district map is located on the inside of the front cover.

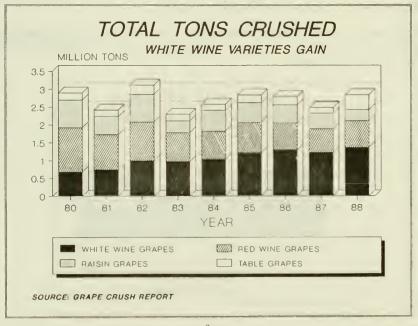

GRAPE PRICES CONTINUE TO RISE

California grape growers received an average price of \$260.07 per ton for grapes crushed in 1988, up 18 percent from the 1987 average price. The average price rebounded by 62 percent since 1985. The 1988 price was the highest on record -- surpassing the \$249.40 price paid in 1981. No adjustments in these price levels were made to reflect the effects of inflation.

The 1988 crush totaled 2,840,630 tons, up 14 percent from the 1987 crush but 9 percent less than the record-large 1982 harvest. White wine varieties continued to account for a larger share of all grapes crushed while raisin varieties declined.

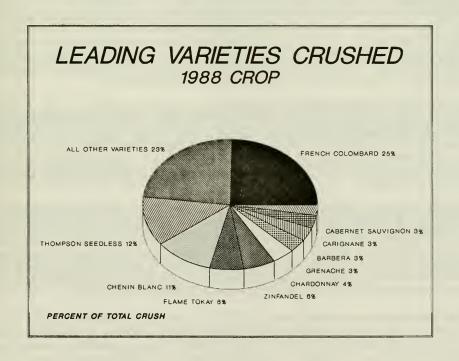

LEADING GRAPE VARIETIES

French Colombard, the most widely planted grape variety in California, continued its dominance with 25 percent of the crush volume. Thompson Seedless, a raisin variety grape, remained in second place with 12 percent of the total crush. The remaining top ten varieties were all wine varieties except the fourth largest -- Flame Tokay which falls into the table grape classification.

Grapes produced in District 4 (Napa County) received the highest average price of \$981.54 per ton. District 3 (Sonoma and Marin counties) received the second highest return of \$781.15 per ton. Of the grapes grown Statewide, Chardonnay grapes received the highest average price of \$1,122.36 per ton. The average price paid for Cabernet Sauvignon grapes was \$822.47 per ton. The 1988 Thompson Seedless price was \$114.78, down 6 percent from the \$122.45 price paid last year. The crush volume of Thompson Seedless grapes declined by 12 percent from 1987.

EXPLANATION OF TABLES

TABLE 1 is a <u>summary of the 1988 crop State totals</u> by grape type and varieties that are shown in detail by grape pricing districts in Tables 2 through 6. State totals and averages for 1987 are shown for comparison.

TABLE 2 includes <u>over-the-scale fresh tonnage of all grapes crushed</u> by California processors from the 1988 crop. Over-the-scale fresh weight tonnage includes materials other than grapes (MOG) and defects. This table is broken down by the 17 grape pricing districts and by variety. State totals for 1987 are shown for comparison. Crushed tonnage includes <u>all grapes crushed</u> whether: grown and crushed by processors: purchased and crushed by processors; crushed by cooperatives, juice manufacturers, etc.; or crushed for others, including growers.

TABLE 3 shows the <u>weighted average degrees Brix for all grapes crushed</u> (TABLE 2) by California processors from the 1988 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 1987 are shown for comparison.

TABLE 4 includes net weight fresh tonnage of all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy by California processors from the 1988 crop. Net weight fresh tonnage does not include material other than grapes (MOG) and defects or other weight adjustments deducted from gross weight. The purchased tonnage is reported by variety and grape pricing districts. State totals for 1987 are shown for comparison. TABLE 4 does not include tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices for all tonnage shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

TABLE 5 shows the weighted average degrees Brix for all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy (TABLE 4) by California processors from the 1988 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 1987 are shown for comparison. TABLE 5 does not include degrees Brix of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

TABLE 6 gives the <u>weighted average price per ton, delivered basis, of all tonnage purchased for wine, concentrate, juice, vinegar, and beverage brandy</u> (TABLE 4) by California processors from the 1988 crop. The weighted average prices are reported by variety, and grape pricing districts. State averages for 1987 are shown for comparison. TABLE 6 does not include prices of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

Weighted average prices reflect final prices through January 10, 1989 and include reference price contracts written prior to January 1, 1977 with prices final as of February 25, 1989. Weighted average prices also include any Brix adjustments, bonuses, or allowances. Prices are equivalent to delivered basis in the area grown including normal within-area hauling allowances. Purchases made on a roadside basis

include the usual hauling allowance for local delivery in the area grown. Out-of-area purchases made on a delivered basis do not include extra hauling allowances for delivery outside the area.

The following example indicates the method used for calculating weighted averages:

		Total G	rapes						P	nal Prices of Grapes	Purchae	ed fro	Gro			
	1 1	Crush				Total		1						Actual final price paid by		
Variety	Dist.	Over	Wtd.	Net	Wtd.	Brix	Base		table	Brix Adjustment		Brix		winery to grwr at each base	Paid	Wtd.
		the	Avg.	Weight	Avg.	(0-1)	Price		ix	Factors Per Degree		ustment		price and Brix adjustment	(0-1	Average
	1		Degrees		Degrees	(Columns)	Per		vita .	Brix Per Ton		imits		factor including bonuses or		Price
	1	Tons	Brix	Tons	Brix	\5 x 6 /	Ton	Max.	MID.	Plus and Minus *	Base		14	allowances. Dollars/Ton	\ 5 X B /	Per Ton
Column										10		1.13		B		
Zinfandel	1	100.0	20.1	100.0	20.1	2,010.00	\$ 450.00	25	19	+ or - 10%	22	24	20	\$ 364.50	\$ 36,450.00	\$
Zinfandel	1	20.5	21 -3	20.5	21.3	436.65	450 -00	25	19	+ or - 10%	22	24	20	418.50	8,579.25	
Zinfandel	1	_10.6	23.5	10.6	23.5	249.10	450.00	25	19	+ or - 10%	22	24	20	517.50	5.485.50	
		131.1	20.6	131.1	20.6	2,695.75									\$ 50,514.75	\$ 385.31

Columns 4 and 6 were obtained by dividing the total Net Fresh Tons, (Columns 3 and 5) into the total Brix of these same tons (Column A): 2.695.75 = 20.6 131.1

Column 15 was obtained by dividing the total Net Fresh Tons, (Column 5) into the total dollars paid for these same tons (Column C): \$50.514.75 = \$385.31

TABLE 7 shows all grape tonnage purchased as distilling material other than beverage brandy by California processors from the 1988 crop. The tonnage, weighted average degrees Brix and price per ton are shown by grape type and variety. State totals and averages for 1987 are given for comparison.

TABLE 8 shows <u>base prices paid to growers</u> by variety, by Brix adjustment factors, and percent of variety tonnage. Weighted average base prices are included.

The Brix adjustment factors determine adjustments to base prices to compensate for sugar variations. In this Report, adjustments are expressed in dollars per ton, or percent of base price per degree variance from the established Brix base. Occasional lots are traded on price per degree Brix as delivered.

TABLE 9 includes tonnage of all grapes crushed to growers' accounts by California processors from the 1988 crop. Growers retained ownership of these grapes at the time of crushing. This tonnage is reported by grape pricing districts and variety. Comparisons with 1987 are shown.

 b/ Percentage total by variety will not necessarily add to 100.00 due to rounding.

[|] described to the system of the classification of the control of

NO PREMIUM OR PENALTY

The following Brix adjustment factors are on a per degree Brix basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated. Most processors, however, indicate maximum and/or minimum Brix acceptance limits. Grapes testing above or below these limits may be subject to price renegotiation, acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base price and bonus unless otherwise stated. There are factors other than Brix, such as material other than grapes (MOG), defects, weight loss in late harvest grapes, and sugar/acid ratios that affect grape prices. These were not considered in this presentation, unless otherwise stated, but were considered in arriving at weighted average prices. NOTE: Brix adjustment factors designated with an asterisk were added since release of the Preliminary Grape crush Report, 1988 crop.

GRAPE CRUSH REPORT

OVERVIEW

Information contained in this Report was supplied by processors to fulfill the reporting requirements of Section 55601.5 of the Food and Agricultural Code.

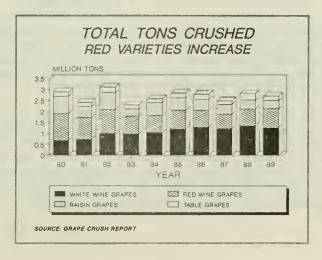

The Final Grape Crush Report includes all grape tonnage crushed and purchased during the 1989 season. Changes in tonnage, Brix, and prices from the preliminary report to this final report were due to: additional purchased tonnage and prices from reference price contracts that were in effect prior to January 1, 1977 and were priced by February 25, 1990; late reports; and corrections to the original data. Reporting errors by some processors have caused a change in some district/variety entries.

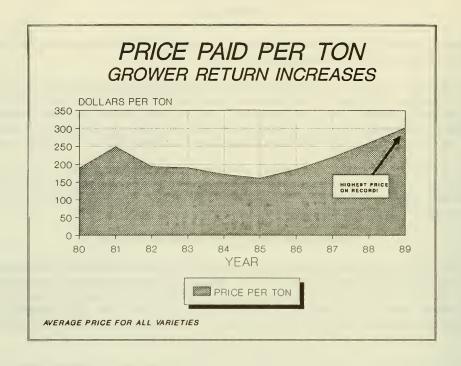

Details of the crushed tonnage, degrees Brix and weighted average prices were reported by grape type and variety as well as by grape pricing district. The 17 districts refer to the area in which the grapes were grown as defined in the Administrative Code. A district map is located on the inside of the front cover.

SUMMARY OF GRAPE TONNAGES AND PRICES

The 1989 crush totaled 2,720,270 tons, down 4 percent from the 1988 crush and 13 percent less than the record-large 1982 harvest of 3,115,531 tons. White wine varieties continued to account for the largest share of all grapes crushed, but the total tons crushed were 6 percent lower than 1988. The 1989 red wine variety crush totaled 871,760 tons, up 15 percent from 1988. Tons crushed for raisin and table type varieties were down 12 percent and 32 percent, respectively from 1988. (See chart below.)

California grape growers received an average price of \$302.72 per ton for grapes crushed in 1989, up 16 percent from the 1988 average price. The average price increased by 88 percent since 1985. The 1989 price was the highest on record -- surpassing the \$260.08 price paid in 1988. (See chart page 2.) These price levels were not adjusted for inflation.

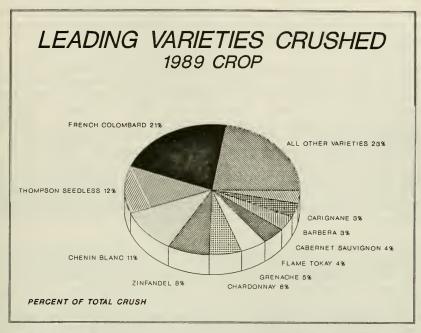

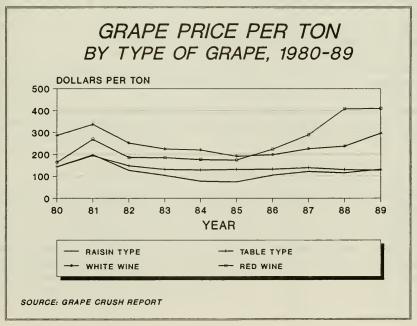

LEADING GRAPE VARIETIES AND DISTRICTS

French Colombard, the most widely planted wine grape variety in California, continued its dominance with slightly greater than 21 percent of the crush volume. Thompson Seedless, a raisin variety grape, remained in second place with 12 percent of the total crush. The remaining top ten varieties were all wine varieties except the seventh largest -- Flame Tokay which falls into the table grape classification.

Grapes produced in District 4 (Napa County) received the highest average price of \$1,149.86 per ton, up 17 percent from 1988. District 3 (Sonoma and Marin counties) received the second highest return of \$926.71, up 19 percent from 1988. Of the grapes grown Statewide, Cabernet Franc grapes received the highest average price of \$1,244.44 per ton. The average price for Cabernet Sauvignon grapes was \$1,032.15, up 25 percent from 1988. The 1989 Chardonnay price of \$1,224.62 was up 9 percent from last year, while the 1989 Thompson Seedless price of \$132.02 was up 15 percent from last year.

EXPLANATION OF TABLES

TABLE 1 is a <u>summary of the 1989 crop State totals</u> by grape type and varieties that are shown in detail by grape pricing districts in Tables 2 through 6. State totals and averages for 1988 are shown for comparison.

TABLE 2 includes over-the-scale fresh tonnage of all grapes crushed by California processors from the 1989 crop. Over-the-scale fresh weight tonnage includes materials other than grapes (MOG) and defects. This table is broken down by the 17 grape pricing districts and by variety. State totals for 1988 are shown for comparison. Crushed tonnage includes all grapes crushed whether: grown and crushed by processors; purchased and crushed by processors; crushed by cooperatives, juice manufacturers, etc.; or crushed for others, including growers.

TABLE 3 shows the <u>weighted average degrees Brix for all grapes crushed</u> (TABLE 2) by California processors from the 1989 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 1988 are shown for comparison.

TABLE 4 includes net weight fresh tonnage of all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy by California processors from the 1989 crop. Net weight fresh tonnage does not include material other than grapes (MOG) and defects or other weight adjustments deducted from gross weight. The purchased tonnage is reported by variety and grape pricing districts. State totals for 1988 are shown for comparison. TABLE 4 does not include tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices for all tonnage shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

TABLE 5 shows the <u>weighted average degrees Brix for all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy</u> (TABLE 4) by California processors from the 1989 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 1988 are shown for comparison. TABLE 5 does not include degrees Brix of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

TABLE 6 gives the weighted average price per ton, delivered basis, of all tonnage purchased for wine, concentrate, juice, vinegar, and beverage brandy (TABLE 4) by California processors from the 1989 crop. The weighted average prices are reported by variety, and grape pricing districts. State averages for 1988 are shown for comparison. TABLE 6 does not include prices of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices shown in this table are final and not subject to change Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

Weighted average prices reflect final prices through January 10, 1990 and include reference price contracts written prior to January 1, 1977 with final prices as of February 25, 1990. Weighted average prices also include any Brix adjustments, bonuses, or allowances. Prices are equivalent to delivered basis in the area grown including normal within-area hauling allowances. Purchases made on a roadside basis include the usual hauling allowance for local delivery in the area grown. Out-of-area purchases made on a delivered basis do not include extra hauling allowances for delivery outside the area.

The following example indicates the method used for calculating weighted averages:

	1	Tota	l Grapes	1	1				fina	Prices	of Grapes	Purcha	sed fi	ram G	rower(s)			
	1	Cr	ushed	Net								1			Actual Final Tr			1
	1	Over		Weight							djustment				Winery to Grwn			Wtd.
Variety	Dist	The	Ave.	Fresh		Total Brix		Accept			Per Degree	Briz .	Adjus		Price and Brix			Average
	:	Scale	Degrees	Tons	Degrees	(Column 5 x	Price	Brix Li	mits	8riz	Per Ton		Limit	s	Factor Includir	ng Bonuses or	Columns	Price
	!	Tons	Brix		Brix	Column 6)	Per Ton	Min.	ная.	Plus	or Minus	Base	Min.	Max.	Allowances.	Dollars/Ton	(5 x B)	Per Ton
Column +	1	3	4	5	6	A	7	8	9		10	12	13	14	В		C	15
Zinfandel	,	100.0	20.1	100.0	20.1	2,010.00	\$450.00	19.0	25.0	+ pr	10%	22.0	20.0	24.0		\$364.50	\$36,450.00	
Zinfandel	į,	20.5	21.3	20.5	21,3_	436,65	450.00	19.0	25.0	- or	10%	22.0	20.0	24.0		418.50	8,579.25	
Zinfandel	,	10.6	23.5	10.6	23.5	249.10	450 00	19.0	25.0	+ or	10%	22.0	20.0	24.0		517.50	5,485.50	
Combined	1	131.1	20.6	131.1	20.6	2,695.75	450.00	19.0	25.0	+ 01	10%	22.0	20.0	24.0			\$50,514.75	\$385,31

Columns 4 and 6 were obtained by dividing the total Net Fresh Tons, (Columns 3 and 5) into the total Brix of these same tons (Column A): $\frac{2,695.75}{131.1} = 20.6$

Column 15 was obtained by dividing the total Net Fresh Tons, (Column 5) into the total dollars paid for these same tons (Column C): \$\frac{\$50,514.75}{131.1}\$ = \$385.31

TABLE 7 shows all grape tonnage purchased as distilling material other than beverage brandy by California processors from the 1989 crop. The tonnage, weighted average degrees Brix and price per ton are shown by grape type and variety. State totals and averages for 1988 are given for comparison.

TABLE 8 shows <u>base prices paid to growers</u> by Brix adjustment factors, percent of purchased tonnage, type, variety and reporting district where grown. Weighted average base prices are included.

The Brix adjustment factors determine adjustments to base prices to compensate for sugar variations. In this report, adjustments are expressed in dollars per ton, or percent of base price per degree variance from the established Brix base. Occasional lots are traded on price per degree Brix as delivered.

TABLE 9 includes tonnage of all grapes crushed to growers' accounts by California processors from the 1989 crop. Growers retained ownership of these grapes at the time of crushing. This tonnage is reported by grape pricing districts and variety. Comparisons with 1988 are shown.

BRIX ADJUSTMENT FACTORS

The following Brix adjustment factors are on a per degree Brix basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated. Most processors, however, indicate maximum and/or minimum Brix acceptance limits. Grapes testing above or below these limits may be subject to price renegotiation, acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base price and bonus unless otherwise stated. There are factors other than Brix, such as material other than grapes (MOG), defects, weight loss in late harvest grapes, and sugar/acid ratios that affect grape prices. These were not considered in this presentation, unless otherwise stated, but were considered in arriving at weighted average prices. NOTE: Brix adjustment factors designated with an asterisk were added since release of the Preliminary Grape Crush Report, 1989 crop.
